AutoCAD Crack +

Available since AutoCAD 2000, AutoCAD Architecture is a 3D modelling program developed by Autodesk. It is not related to AutoCAD LT or AutoCAD 2000. It is capable of 3D modelling using parametric design, and is used to create 3D models for architectural designs. AutoCAD Architecture's DXF import supports DGN, DWG, DXF, PDF, JPEG, EMF, TIF, SVG and PNG formats, and can be read from and written to. AutoCAD Architecture also supports several types of scale models including real-world models, origami models, 3D models in 2D, and "extended" 3D models. The 2D and 3D modellers in AutoCAD Architecture are vector-based, which allows the output from these tools to be converted to any format that supports vector graphics. AutoCAD Architecture is the 3D part of the AutoCAD suite. As such, it is the only program in the suite that can create architectural work. AutoCAD 2013 and 2016 available since AutoCAD 2013 and AutoCAD 2016 respectively, allows users to import and create 3D models in the native 3D format of the 3D modelling program. AutoCAD Architecture uses the native format. Thus, a 3D model created by AutoCAD Architecture in AutoCAD Architecture can be directly imported into AutoCAD or AutoCAD LT. AutoCAD Architecture 2016 also introduced the ability to import in both 2D and 3D for a single drawing. This allows users to have both 2D and 3D modelling tools available to create a 2D drawing which can then be converted to a 3D model using the 3D modelling tools in AutoCAD Architecture. The Life Orientation Test-Revised (LOT-R) has been developed to assess dispositional optimism in Spanish-speaking populations, but no studies have tested it with college students. The aim of this study was to translate the LOT-R into Spanish and validate it for use with a sample of college students. A cross-sectional study was performed using 400 college students (175 men and 225 women, ages 18-30 years). The students were administered the Spanish version of the LOT-R (LOT-R-S) and the Spanish version of the Beck Depression Inventory (BDI-S). Internal consistency (Cronbach's alpha) was 0.89. Convergent validity (Pearson correlation) was 0.53 (p<0.05) with the BDI-S. Factor analysis of the 14 items showed a three-factor solution: Tolerance 2.62, R2=0
