Free downloads are the most important prerequisite to a fully functioning website. After updating the homepage for Funcube to reflect recent news and changes, we also took the opportunity to remove a few low priority files. Now that we've got those out of the way, we're back to focusing on taking care of the rest. But, before we focus on the future, there are a few things we need to talk about. The first of those things is actually the reason for the removal of those files and that's because of how our download system works. The download manager that Funcube uses is written on a piece of software called Nagi, which stands for Nagios. Nagi is a piece of software that has been around for quite a while, but most of the times it's been looked at more for its ability to monitor servers, rather than as a way to download files. Nagi has a unique way of letting people download files, and this method along with a bit of protocol get put into use when Funcube makes
