A high-gain overdrive that will add extra gain to the signal, which will then be compressed to the point of maximum distortion. Additional Gain Description: Adds additional gain to the signal, which is then compressed. Drive Level Description: Adjust the amount of extra gain added to the signal by the overdrive. High gain description: Takes a high-gain signal and adds extra gain to it. It will then be compressed. Low Pass Filter Description: Enables the filter, which cuts off the frequencies above the level of the cutoff frequency. Cutoff Frequency Description: Selects the frequency at which the low pass filter will begin to work. A high-gain amp with lots of added gain. High Gain Description: Adds more extra gain to the signal than the low pass filter can handle. Gain Description: Adjusts the overall level of the amp. Attack Description: The time for which the input is fed into the amp. Filter description: Filters out the high frequencies (buzz, sustain, and other stuff) and only plays the low frequency stuff. Sustain Description: Sustains a certain amount of voltage for the time that the pedal is held down. MIDI device 1 ports Use to select your keys. MIDI device 2 has 2 ports: GATE on, GATE off. Use to select if your key is being cut or not. KEYRO Description: A simple overdrive. It will compress the extreme peaks to make a sound similar to an overdriven amplifier. Drive level Controls the point at which the signal starts to distort, and the degree of distortion. KEYRO Description: MIDI device 1 ports Use to select your keys. MIDI device 2 has 2 ports: GATE on, GATE off. Use to select if your key is being cut or not. So: In order to amplify your key you need to plug the plug-in's "Mix Channel" on your DAW and select the option "Loop On" on your plug-in. The plug-in's Midi Channel has to be turned on as well. To get the "off-one" sound, just don't turn "Loop On" on. Here is a really good online guide. It explains what do you need to do to get your key into a loop, and what you can change to adjust the sound. I hope this helps! Vancouver has a "Massive Hole" in its Digital Infrastructure (2014) - joe_bleau ===== joe_bleau Back in 2000, there was some talk of setting up a massive fiber/backbone internet project in Vancouver, but it never materialized. Instead, they formed a consortium which runs an AMS-IX network. Since then, there hasn't been any discussions or plans to have a government- led, municipal-owned infrastructure. This can't be good for the digital revolution. Day: March 7, 2014 New Cross, 19th December 2013: The boys in the City are on a roll, having just knocked Bloemfontein Celtic out of the Vodacom Challenge last weekend, they once again proved themselves to be the better side 1d6a3396d6
