Obtaining an accurate 3D digital model of the colon from abdominal CT scans is an important preoperative step in surgical planning for colon cancer and in radiological evaluation of conditions affecting the colon. The purpose of this study was to develop and evaluate a novel computer-aided method of 3D reconstruction of the colon in a clinical setting. Seventy-four consecutive CT scans of the abdomen performed on patients who

microcontrollers This package contains the basic flowcode examples for Atmel AVR microcontrollers. The package also provides standard flowcode examples as well as a package that contains the flowcode examples for the the Atmel AVR and atmel microcontroller. This package provides standard flowcode examples. The package is available in the archive in the subdirectory examples. The present invention relates to a method and apparatus for detecting and locating abnormalities in an assembly of such electronic components as a wiring harness. The invention can be applied to the detection and location of abnormalities in the assembly of electronic components of any type, such as wiring harnesses. The detection and location of abnormalities in wiring harnesses, and the removal of faults therefrom, is an important and time-consuming task in the field of electrical maintenance. In particular, it is important to

detect faults in the harnesses associated with electric or electronic equipment and to eliminate them as soon as possible in order to reduce the cost of repairing and reinstalling the equipment. Assembling electrical equipment involves the use of several types of electrical wiring, cable and the like, and the specific combination of these various elements to produce an electric or electronic device. When the device is completed and tested, the harness is frequently the last component of the device to be tested. This is because harnesses and cables generally are assembled after the rest of the device, and it is desirable to test them separately so that any faults will be easily detectable. A wiring harness comprises many different types of electrical wiring, cable, devices and the like. It is usually a rather complex assemblage of

Usage Downloading Compiling Cmake uses libtool to generate makefiles for the projects, so if you don't already have libtool installed, it must be installed before compiling the package. See Install-LibTool on the AVR-C website for details. Compiling Download Flowcode from the flowcode.org website and unpack the zip file. To compile the flowcode examples into the flowcode-* binary executables, run the command `cd AVR-C/examples/flowcode cmake make make install` That command will build the flowcode-avr executable and copy it to flowcode/bin. Using While Flowcode can be compiled to run on any AVR-C-compatible board, for example on the Cortex-M0/M0+ / Atmel megaAVR board, the current Flowcode packages are compiled for the MINI-MAX / AVR-C board. Flowcode compiles by default for the flowcode-c compiler and flowcode-avr for flowcode-avr-c. Flowcode can also be compiled using another compiler such as AVR-

C or the GNU toolchain. The AVR-C and AVR-C-C Flowcode examples can be compiled and run using the flowcode-avr-c package. To compile and run the flowcode-avr package from the source directory, run the command `mkdir build_flowcode cd build_flowcode cmake.. make make install`. To compile and run the flowcode-c package from the source directory, run the command `mkdir build_flowcode cd build_flowcode cmake.. make make install`. To see instructions on how to use Flowcode on a different AVR-C compatible board, consult the boards documentation. Installing the flowcode example packages Download and unpack the flowcode-examples package from the flowcode.org website and copy the directories in the root directory of the flowcode-examples package to a directory on your computer. For example, the flowcode-examples package is downloaded as flowcode-examples-1.1.zip. To install the example packages, run the command

cd flowcode-examples cmake make make install
Binary packages To install the flowcode-avr-c
and flowcode-avr-c-c binary packages, run the
command cd flowcode-avr-c cmake make make
install To install the flowcode-c and flowcode-c-
c binary packages, run the
