1. Field of the Invention
The present invention relates to a storage device, such as a hard disk drive, for recording data on a recording medium, a hard disk drive to record data on the recording medium by using

the storage device, and a method of controlling this storage device. 2. Description of the Related Art In conventional art, in a storage device, such as a hard disk drive, there is adopted a storage device of which the power supply is switched ON and OFF by a command signal (command signal) from a host device, or a storage device of which a power supply is permanently left ON (for example, see Japanese Unexamined Patent Application Publication No. 9-232614 and Japanese Unexamined Patent Application Publication No. 10-292314). What's New In?

===== LlistarMp3s is a small but fast audio compressed file analyzer tool. LlistarMp3s is very simple application, that works like a media player, so it

need only one directory to scan, plus you can scan a single file or a whole folder. LlistarMp3s is free software, released under the GNU General Public License. lxplay-wm.exe is a free screen saver for Windows, that allows you to watch a simple presentation of the full screen or only the desktop. lxplay-wm is written entirely by Jacques Boulon, and can be run from a CD or DVD-ROM. lxplay-wm features a slideshow of the wallpaper (dynamic, idiotic, fun, for example), the desktop, the windows, the menus... It has a choice between 16 and 256 colors, with 16 colors being recommended, even if 256 colors mode is available. lxplay-wm comes with default wallpapers, sounds and a 5 min long sequence, that can be selected in start menu. In "real mode", the screen saver shows images from the time wallpaper, while in "idle mode", it shows only the desktop. lxplay-wm works also as a background screensaver (which is fully customizable, with clickable controls to play your favorite music or slideshow), or in "system tray mode" (with a tray icon, which shows the current wallpaper, as well as time, battery level and OS load), or even in full-screen mode (which is a modal version of "real mode", which is actually combined with full-screen mode). Lxplay-wm also has a command line version, which allows a sequence to be created on disk, and run as a screensaver. lxplay-wm is just an example of what can be done with the

liblux.dll, the Lux Core Library. Various more power-user features can be found in lxmsw.dll, the Lux Multimedia Software Library, developed in 1994 by Dutch engineer Johan Daemen for the DOS version of lxplay-wm, and kept for various reasons. LuxCore is the LuxCore library for the Windows platform. It is developed by Anthony Jones, and based on liblux.dll, the LuxCore Library. The source code can be downloaded from the "download" link on the main page. The Windows version has been compiled
