What's New in the?

Mac OS X has become a bit of an ugly duckling when it comes to buying apps. That's because while it doesn't have the selection that Windows has, there are only so many apps available for it. This leads to the same-same list of usual suspects, many of which you've seen already. But that doesn't mean you can't find something cool! What about the fact that apps for

Mac OS X aren't necessarily Mac-exclusive, either. Many have managed to cross over into the Windows universe, which makes us wonder why people are so afraid of it. Is it really as bad as people say? Or are there some gems out there you haven't seen yet? #1 Security It's probably the most important thing, isn't it? A virus, a hacker, a Trojan horse - whatever term you want to use for that irritating little bugger that can lay waste to everything on your system, it's a pretty big deal. And thanks to Mac

OS X's built-in anti-virus, there is nothing to worry about. In fact, you can be pretty sure that your Mac OS X will be protected from any viruses that might be floating around. It's just that simple. Maybe you've installed a different antivirus software before, and your experience with it has left a bad taste in your mouth. Well, this app won't disappoint you, and you'll be pleased to see it's fully integrated with the Mac OS X OS. #2 Photo Management You know those beautiful photos you have on your

computer? They're a big part of your life. They've been taken with your camera, your iPhone, your iPad or your DSLR. When you need to get them off your device and into your computer, they could end up all over your hard drive. And as your photos grow and grow, you'd have to spend hours and hours scrolling through all of them, in order to find the perfect one. What you need is an app like PhotoFiltre. With this software, you can organize and manage all of your photos. You can categorize

and sub-categorize them, and you can also search through them for something specific. You can also convert your photos, edit them, resize them and many more. The program also comes with a password manager and multiple sharing options. #3 Music & Audio Music is something that people use their computers for for a lot of things. It's often the background of people's lives, and they enjoy it a lot. Whether it's in the form of audio tracks, ringtones or podcasts, the most important thing is that

they're there, whether they're playing in the background, or not. With that in mind, you don't need to go out and get an entire music player for your Mac. All you need is an app like AirAudio. It's small and easy to use, and it's able to
