RetroBar PC/Windows (2022)

RetroBar is a tool to change the modern Windows taskbar to the classic Windows 95, 98, 2000, Windows Me, XP, and 2003 taskbar. If the classic taskbar is not enough for you, RetroBar can also be used to replace the modern Windows taskbar with a start button opening the classic start menu. As a last option, RetroBar can be used to replace the modern Windows taskbar with the classic Windows 95 taskbar. The classic taskbar doesn't need to be installed on the computer. The tool doesn't interfere with the modern taskbar when a classic taskbar is chosen. Features: Classic Windows Taskbar with start button Classic Windows start menu Native notification area Show and hide desktop clock Show and hide native task list Windows 10 UWP apps Hidden Desktop Approved – Published Clipboard manager A clipboard manager is a software application or a utility used to transfer data from one application to another, or to manage a clipboard. It is especially used for cut, copy, and paste of large amounts of data without constantly switching between applications. Clipboard managers can also help to keep a history of copied data. Clipboard managers are usually software that runs on the computer operating system, and applications such as web browsers have built-in clipboard managers. There is also a class of applications called clipboard managers that run as stand-alone programs. Clipboard managers are usually accessible through the Edit menu of every application, which contains functions to copy, cut, and paste data to the clipboard. Some clipboard managers may also allow the user to automatically paste data to another program or web page after pasting it to the clipboard. In such cases, the copied data remains available for pasting for a short time. Clipboard managers are often used by people who work with multiple applications, and whose work involves extensive use of the clipboard, such as graphic designers or translators. One of the basic features of most clipboard managers is that they maintain a history of past clipboard operations so that data can be retrieved easily. Some clipboard managers are designed to work with operating systems that do not include a clipboard manager by default. For instance, instead of saving text in the clipboard, a user can copy it to the clipboard manager. Clipboard managers are often used to cut, copy, and paste program settings and results. Clipboard

Keyboard macros are one of the features of TextEdit in Mac OS X Lion, Mountain Lion, and Mavericks. These can be assigned by holding down a key combination and, after the keyboard has been activated, can be triggered automatically. RetroMacro is a free utility that allows you to define keyboard shortcuts and set them to execute either whenever a key is pressed or when some other event takes place. Thus, it is possible to have a keyboard macro that automatically switches to the next file in a list view when a number key is pressed, or to activate a tool in Excel when a specific key combination is hit. Furthermore, RetroMacro allows you to store macro descriptions as strings, so it is possible to have an in-line comment on a keyboard shortcut. To use RetroMacro, you simply press and hold a key combination while the program is running. The key combination can be one of the 16 hotkeys, modifier keys, or any other key combination. Then, the program displays a dialog box that includes the name of the macro that will be performed, a description of the action, and a list of all keys that will be pressed. To finish, you simply select one of the keyboard macro actions and press the Enter key. You can even define several macros for a single key, and assign different actions to the same key combination. RetroMacro also comes with a script editor for creating keyboard macros from scratch. It is possible to write your own scripts and store them inside your project. Also, you can access the command line with its own RetroMacro interface, and perform operations there. RetroMacro is developed as a single developer project and is free for personal use. RetroBar [Mac/Win]

Retrobar is a tool to convert the taskbar from the modern version of Windows to its old school counterpart. The tool is designed for Windows 10 and offers customizable options that allow the user to preserve the taskbar layout as it was before. In addition to that, users will be able to unlock more features like show and hide the clock, customize its position, add a start button and toggle between the different taskbars. Download RetroBar for Windows 10 The developer has released a version of RetroBar for Windows 8.1 users. For those who are unfamiliar with the taskbar, the default taskbar has three columns - the name of the application, a small icon and the location (the modern version). The third column can be customised to include an icon, folder, shortcut, or even an application or website. The name of the application can be changed by the user too. Furthermore, the taskbar is visible for free applications only. Additionally, it has the ability to use the desktop as a more persistent thumbnail. Most importantly, the taskbar is extremely customizable. As can be seen from the screenshots below, the retro taskbar for Windows 8.1 can be a bit tricky to handle. For example, the start button cannot be moved as it is tied to the location, but the position can be fixed by the user. What's New In RetroBar?

As the name suggests, RetroBar is a tool designed to change the standard taskbar of modern Windows versions to the classic versions of Windows 95, 98, 2000, Windows Me and XP. According to the developer, the tool is based on a library used for Creating shell replacements via.NET dubbed ManagedShell, so there should not be any compatibility or performance issues. The idea behind the tool is to completely replace the modern taskbar with an old school alternative. Consequently, only one taskbar is available at a time and reverting to the new taskbar entails closing the app. Other noteworthy features of the new taskbar include a start button that opens the modern start menu, native notification area, show and hide clock as well as native task list with UWP app support. The developer states that the tool comes with Theme support and hence, custom themes can be added. To create a custom theme, users need to access the Themes folder and place a valid XAML theme file there. Learn how to: – Decide what you want to change in the taskbar – Customize themes and icons – Add and remove apps from the taskbar – Create your own taskbar buttons and menus – Add windows button and full screen mode support With Windows 10, large icons have replaced text labels and multiple instances of the same app are neatly stacked together into one icon in the taskbar. Without denying that Windows 10 manages to keep things neat and simple, some may prefer having the old taskbar.
