Partition Find and Mount is a software for Windows that allows users to find partitions and mount them as virtual disks. The application is free, at least for the non-registered version. However, the one-time free version limits to one partition/virtual disk image per installation. The very first time this program is used, it'll download two additional files: a registry file called PartitionFind.reg and a program named KB925354. The installation will work only from the local drive, that is, the drive where the installation file is placed. The file itself is a MSI package, but no matter what version you have, it is safe to say that installing it will not harm you. The files are described as follow: PartitionFind.reg. Download: 1KB This file makes sure all the parameters in the program work properly. The installer cleans up the registry, but it is safe to say that you can safely ignore the application if you're planning to use the program at least once. KB925354. Download: 1.37KB This file is the program itself. After the installation, it's a small package of about 200 KB which should fit as a default on any Windows 10, 8, 8.1, and 7 machine. It's a MSI file, and once unzipped, you'll see a folder called PartitionFind which will contain the files mentioned. If you're not using a previous version of Windows, you can safely erase the folder, as it won't cause any harm. Main Features: Partition Find and Mount is specifically made for
