SimTec offer a .NET API that is used to integrate AutoCAD with other application, such as Visual Studio. Visual LISP Visual LISP (VLISP) is a proprietary version of LISP. VLISP supports LISP packages, as well as Access databases. AutoLISP allows Visual LISP programs to be executed from the AutoLISP IDE, an extension to AutoCAD's own LISP IDE. Visual LISP is used by designers and engineers to automate repetitive tasks that they are doing on a regular basis. Its more common usage however is to make a custom macro for an individual project. AutoLISP can be used to perform a variety of functions such as extracting data from databases, opening and closing CAD files, or saving it to

file. AutoLISP is supported by Autodesk, SimTec and Corel (as a free add-on to CorelDraw).

AutoLISP is derived from Visual LISP, which allows any Visual LISP program to be run in the context of AutoCAD. Visual LISP code can be exported to .NET, or Visual Basic code. Some information on using Visual LISP with AutoCAD: AutoCAD Architecture and AutoCAD Electrical, support the ARX and LT4 file extensions used by VLISP. AutoCAD Architecture's own Visual LISP (VLISP) module is used to assist in the design of electrical and plumbing fixtures. The VLISP module allows the user to: Design piping and conduit and include ducts, systems, and systems layouts; Include electrical, plumbing, or other facilities such as air handling, cooling or heating systems; Include overheads, appliances, and other equipment such as lights; and Define the location and locations of pipes and conduit. AutoCAD Electrical also provides a VLISP module. It allows you to design and design electrical, plumbing, and other facilities with the standard module. The module has a user interface, where 5b5f913d15
