KeyMacro is a program created to help you capture your keyboard keystrokes in a word processor. It works with Microsoft Word 2007, and other similar programs, and it allows you to save the recorded keystrokes into a text file.

KeyMacro captures all the keystrokes made on the word processor, and then it saves them into a text file. It does that by analyzing the text of a word processor document and then extracting the words you type, and it then saves that data into a text file.

This software is a stand-alone utility, and it does not require you to install any other program.

KeyMacro comes with a minimal set of options. In the Options Window, you
