Ask HN: What is the most upvoted HN link of the year? - tapper How about one that's highest upvoted? Also, doesn't have to be a comment, but if it's a post or thread that got upvoted, please include a link to the post or story. Edit: added link to post containing the URL (probably will have to split this into separate discussions) =====> shoo > How about one that's highest upvoted. I got this page from google (and the top result was even if I searched [find comments with highest upvotes]). [There are no _highest_ or _most_... Just highest. ~~~ tapper I take it back about splitting this into separate discussions, as that was an accident with the domain I did find. The error was on my part. I had to rephrase the question, since I'm curious about either top-voted or highest-voted, the latter being what I was really wondering about. ----- Porthos9K This seems impossible, given that each post can receive up to four votes per page. ~~~ tapper Forgot about the limit. I was thinking for the question of the highest and _only_, not the highest and _most_. Case report: acute non-lymphoblastic leukaemia with an unusual translocation (t(4;9)). An otherwise normal young woman presented with a clinical picture of acute non-lymphoblastic leukaemia. Let's take a look at the basics of using Photoshop brushes. What Are Photoshop Brushes? Brushes in Photoshop are sets of circles with a brush size and shape applied to them. The fill color of the circle represents the color applied to that brush and the stroke color represents the color of the line from the brush. The circles created from the brush are scattered throughout the image, layer, or document. You can select a brush by clicking on the brush icon in the top bar and choosing a brush from the drop-down menu. All the brushes applied to your image will be listed at the bottom of the palette window. A brush is activated with the T key or by clicking on the drop-down menu with the brush. To select a brush, look for one with an OK icon in the brush tool/color/brush panel. It's a good idea to practice on a new document before you start creating images from scratch. Step 1 Step 2 Step 3 Step 4 Note: With the Gradient tool and a gradient stop, you can create more elaborate effects as seen here. The default Brushes in Photoshop are shown in Figure 1. The default brush settings are also shown in Figure 2. You can use the Brush Tool to paint on any layer in the Layers panel. Pressing the T key while dragging creates a clone of the brush, which lets you create copies of an image with a brush. You can modify the brush settings in the Tool Options area, which you can access by clicking on the Brush or Pen options

button in the toolbar. The panel can be expanded or collapsed by clicking on the button on the right of the panel. Step 5 Step 6 If you have the layers panel open you will see the brushes you used in that layer. To move a brush, click on its name in the Layers panel. To delete a brush, hover the cursor over the brush name and click on the x to the right of it. Brushes are applied to the image in the layers panel just below where they are initially selected (on the left of the image). The brush settings are in the Tool Options area. A tooltip message in the top right corner of the Brush Options area will tell you what the settings are. If you change the brush settings, clicking on the brush icon in the top bar will bring
