DXF files are text files that can be read using any text editor and from which all the information can be extracted using a programming language. AutoCAD includes a number of functions to

open, modify and save DXF files, a format which is used by virtually all CAD programs. The DXF file format is so widespread that in many cases, even non-CAD programs can produce it and be read. However, it is not a true CAD format, as it does not contain any geometric data. ## Unity Unity is a cross-platform 2D development tool that is used to create programs for computers, tablets, smartphones and games consoles. Unity is used for creating games, web applications and other applications that run on mobile devices, desktops and game consoles. ## Windows Presentation Foundation (WPF) The WPF framework is a high-level language for the development of graphical user interfaces for Windows applications. The WPF framework includes the .NET Framework and provides the developer with the necessary tools and languages to create graphical user interfaces, such as buttons and menus. ## R R is an open-source language for statistical data analysis and visualization. ## Visual Studio Visual Studio is a suite of integrated development environments, including a version of Microsoft Visual Basic (VB) that supports the development of applications for Microsoft Windows. It also includes an integrated environment for the development of .NET applications. Visual Studio provides the tool for writing applications in C++, Microsoft Visual C++ or Visual Basic, for the development of .NET-based applications, for the development of applications written in Microsoft Visual C#, and for debugging. ## VBA VBA stands for Visual Basic for Applications, and it is an integrated development environment (IDE) designed for the development of applications written in the Visual Basic programming language. It provides a set of tools to create the user interface and some simple logic. It includes numerous functions for text processing, formatting and storage, a function for managing drawings, and a function for adding a calendar to the Windows desktop. ## XNA XNA (pronounced Zen-NA) is a development environment for creating games and other applications for the Windows operating system. Stingray Networks, a provider of security and business-to-business integration solutions, recently introduced a new approach to protecting the enterprise from financial fraud. "Spammers, identity thieves, and other cyber criminals are relentless in their pursuit of credit and debit card credentials," said Bill Parrish, senior director of products at Stingray Networks. "The industry is waking up to the fact that traditional spam and phishing attacks are giving way to other types of cyber attacks that require less familiarity, which makes them harder to block. It is impossible to anticipate all the ways that fraudsters will exploit weak spots in the enterprise, and so we're constantly updating our tools to allow companies to pick the best defense for each attack." In the beginning of this year, Stingray introduced a new product that combines traditional spam filters with multiple lines of defense to ensure that only legitimate emails reach employees' inboxes. Stingray's new approach has three steps. First, it uses machine learning techniques to detect malicious email content. Then, it uses the company's anti-phishing technology to stop phishing attempts from continuing past the initial warning and into the victim's inbox. Finally, it employs a behavioral analysis to block unknown or new attacks that target enterprise users. The behavioral analysis is what's new, and it's part of Stingray's new firewall technology, which now includes the first integrated anti-phishing and anti-malware products in the market. "We're seeing the rise of anti-phishing and anti-malware technology in the enterprise market," said Parrish. "But these tools typically work on their own, and this is the first time we've seen one integrated with an existing anti-spam solution. When a breach is detected, it's important to know what's already been blocked, what's just been attempted, and
