- Extensive and customizable library of business model elements - Easily customize your model with a very intuitive user interface - Virtual environment for creating, testing, analysing and evaluating models - Create, view and compare the model outputs Four times. You probably haven't heard of this number in the US, but it's more than twice the number of times the LTV (lifetime value) of the average American consumer is reported to have increased during the last decade. According to U.S. Census Bureau and the U.S. Bureau of Labor Statistics figures, the average LTV for American households increased from \$12,195 in 2000 to \$41,174 in 2008. Factoring this number into our data, most enterprise IT managers would agree that the average client's budget for a technology upgrade -- without a rollback or other disruption -- has likely increased more than four times since 2000. The average New Year's resolution is to eat healthier. But what if there was a way to help you keep your resolve and lose weight at the same time? In February, we explored the research on the value proposition of the average individual in a Weight Watchers® online session, and found that the average member, on average, is expected to save \$1,700 per year. So why hasn't the program succeeded? Weight Watchers hasn't been able to sustain that value proposition. After seven years of operation, the number of members with meaningful weight loss drops to less than 5 percent. According to a recent Apple.com report, "In a survey of 85,000 weight-loss attempts on Apple.com in the past year, 35 percent of users said that within six months of joining the website, they either gained the weight back or began to fall back. Most said they had attempted to lose weight more than five times." The reason for this failure? The average consumer is looking for a more streamlined approach. People don't want to go to a meeting. They don't want to go through the ritual of counting points. They want an online presence. I'll give you an example. Outbound DirectMedia surveyed Apple's most successful large customers, who received the largest share of Apple's total investment, and asked them about their experience with Apple's multichannel distribution platform. These customers, who had already mastered the art of multichannel selling, identified the following problems with the Apple solution: * There were no official guidelines on multich

For some reason, the game only seems to work when I add 1.07GB to the hard drive. I have used the MacFusion disc image and it seemed to run fine on my 15" Powerbook, but not on my 17" Powerbook. I am using the Mac OS 10.4.11. If you have the ability to add memory to your computer, the game runs MUCH better with 512MB of Ram. It is also much smoother if you are using a higher end sound card (Creative Audigy 2, etc.)
