A: I have created boot cds in the past (not directly related to windows recovery), from a Mac, on a windows machine, from a windows machine, from a Linux machine, etc. It has worked out more or less fine in all cases. You do need a capable burn program to do it right, though. You should find instructions at the top of that page, or on the linked page.

--- abstract: 'Within the program "Supernovae as Cosmological Probes" (SUPER), a number of observing programs have been designed to study the characteristics of supernova light curves and their relation to the properties of their host galaxies. Here we describe the optical and NIR band photometric surveys for SN candidates currently carried out by SUPER. For many of the galaxies hosting these supernovae, multi-color photometry (including UBVRIJHK) is available. In this case, the SN will be constrained in the N -dimensional space of host galaxy physical properties at $z=0$, with SN types, light curve shapes, and host-galaxy morphologies helping to break some of the degeneracies. The SN survey program specifically designed to be carried out during LSST operations aims to ultimately obtain the following: 1) at least one confirmed SN in every galaxy with 2) as long an "observing baseline" as possible, and 3) obtaining as many deep *Hubble Space Telescope* visits to all host
