Editor's note: This story originally appeared in our July 2013 issue. When I was a young engineer in the auto industry, I worked with many of the founding members of the Autodesk organization in its early years. All of us were using the industry-standard drafting tool of the day, AutoCAD. For an engineer,

AutoCAD was the easiest, fastest way to get started on new projects. No matter which department you worked in, every project had to conform to AutoCAD. If you worked in the design, drafting, or manufacturing department, you almost always had to begin your project by drawing it out on paper first, and then send the paper to your CAD technician to convert to digital form. That was slow and labor intensive. When I asked why CAD software didn't solve that problem, the engineers in the front office said, "We don't make CAD software. Our customers do." And that's what we did, to satisfy the needs of our customers. Since its inception in 1982, AutoCAD has

become the industry standard. It's now 2001. I've joined Autodesk and I'm now an Autodesk engineer. My first job is to explain to the sales staff why we need a new version of AutoCAD. We're selling a 50% solution, which means we're also selling 50% of the market. AutoCAD is pretty much ubiquitous. All of the engineers that we sell to are using it. They have to use AutoCAD for day-to-day projects. It's the only CAD that our customers have learned. They've used it for ten, fifteen years. But they just found out that there's a new release, and it has some cool new features that they want to use. How do we convince them to buy a new version of AutoCAD? I explain the fact that

AutoCAD is pretty much ubiquitous. It's used by most engineers in my company. It's been used for the past 15 years, by every engineer in our sales organization. It's the de facto CAD. I also explain that most of the time, they will run AutoCAD on their computer, they can run it on their tablet. And, they can run it on their iPhone. They're all going to run it on their mobile device. I also describe that people are less and less in the habit of buying a new computer and upgrading from one version of AutoCAD to

"He is not an entertainer. He's a fantastic magician. He doesn't have the most expressive eyes, but he is a

magician, and that's what he does."

Bennett is a magician who specializes in comedy and endurance feats. He does all of his performances in the Magic Castle in Los Angeles and teaches all the classes. "I started performing in high school," he says. "I really had no idea what I wanted to do, but I just really enjoyed doing magic and wanted to learn how to do it. I love doing card tricks. I love sleight of hand. I love to do mime and all that stuff. I like magic that makes people smile." Bennett fell in love with the art of magic when he was 6 years old and performed his first trick at a birthday party. "There was a magician there," he says. "He was funny, but he also did card tricks. I

remember, before my mom got home, watching him do tricks, and I said, 'I think I'd like to do that.' It made me really fall in love with magic." As a boy, he never expected he'd be in the same profession as his father, an optometrist. "My dad is also a doctor, and he works at the same practice as my mom, and I never really imagined I'd be doing what he does," he says. "My mom is a nurse and a cook, so they were always a doctor and a nurse, and I was just a clown. But I remember I used to watch them and my dad, and I thought it was the coolest thing in the world. It was definitely something I was interested in doing." He started performing

Ask HN: Is it worth joining Facebook for 2019? - rajivshah I have been a FB user for almost a decade now. But I am moving to a country where my FB accounts are not supported. So I need to look for another social media platform. Can I join Facebook

in 2019 and keep a tab on my social media activity? Or would it be better to use some other platform (Which one is better than FB)?
===== verdverm For general social, I would suggest keeping FB "locked" so you don't see nearly as much garbage.
