How to Use: First, you have to download the file from the link and copy the copy to install.When police officers try to break up a fight, they often end up having to respond to the scene in full equipment, which can be heavy and cumbersome. So two officers in North Carolina have come up with a creative way to make police work that much easier, making officers' uniforms lighter and more comfortable. The idea behind the "Smart Uniform" is that the shirts and pants are stitched into one piece, which can be changed to reflect the work they do. The only problem is that the new in-your-face style of policing is not always popular with everyone. The pair, David Peel and Thomas Brown, from the Charlotte-Mecklenburg Police Department, are still experimenting with whether the shirt and

pants can be swapped out for other colors, but they say it could eventually become a selling point for law enforcement. If all goes well, they hope to start selling the "Smart Uniform" to other departments later this year, according to the police department's website. Q: Eigenvalues of a 3d tensor. How to find the eigenvalues of $\left({\begin{array}{ccc} a & b & c \\ 0 & d & e \\ 0 & 0 & f \\ \end{array} } \right)$ I tried using det(T-λI) and got $d(\lambda-\frac{ae+bc+af}{\lambda})$, but couldn't solve further. A: Write $$A = \begin{pmatrix} a & b & c \\ 0 & d & e \\ 0 & 0 & f\end{pmatrix}$$ and consider the matrix $$B = \begin{pmatrix} d & -b & -c \\ e & -a & -b \\ f & -a & -d\end{pmatrix}$$ (the matrix B is of course symmetric.) For any symmetric matrix A you can construct its eigenvalues in the following way (apply the characteristic polynomial to the symmetric matrix B): $$\det\begin{pmatrix} \lambda & -b & -c \\ -e & \lambda & -b \\ -f$$
