An important part of this process is to choose the right tool for the job. For example, if you want to redraw one of the eyes on a face, use the Pen tool, which is the tool the mouse uses to create a line. If you want to use an eraser, you can use its tool. The Spot Healing Brush tool can be used to correct blemishes. Using the right tool, you can edit an image in ways that are hard or impossible to achieve using another tool, such as PhotoShop Elements or PaintShop Pro. Contralateral hippocampal spike-wave activity in focal or generalized spike-wave paroxysms. The concordance of electrocorticographic and electroencephalographic monitoring data was retrospectively analyzed in patients with clinical focal or generalized spike-wave paroxysms (SWPs). In one patient, concordance was observed with SWP originating in the right hippocampus and terminating bilaterally in the hippocampus and the temporal cortex (focal SWP), while in another patient, it was observed with SWP originating in the right hippocampus and terminating bilaterally in the hippocampus, temporal and occipital cortex (generalized SWP). This suggests that, in some patients, spike-wave activity may arise from bilateral structures. Irinotecan and oxaliplatin combination chemotherapy in treatment of elderly and unfit patients with advanced non-small cell lung cancer. The aim of the study is to compare the efficacy and safety of irinotecan and oxaliplatin (IOX) combination therapy with those of irinotecan monotherapy for advanced non-small cell lung cancer (NSCLC) in the elderly and unfit patients. This retrospective study identified non-squamous histology patients with advanced NSCLC who were evaluated for treatment with single irinotecan (CPT-11) or IOX in China. Over two years (2008-2009), 50 patients received irinotecan, and 42 patients received IOX. The median age of the patients was 65.0 (54.0-74.0) years. In the irinotecan group, the efficacy and safety were analyzed. In the IOX group, the safety was analyzed first. The main adverse events in irinotecan and IOX were similar. The objective response rate, median progression-free survival and overall survival were not significantly different between the irinotecan and IOX groups. The main grade III/IV side effects were diarrhea, neutropenia and neurotoxicity. These findings suggest that IOX may be as effective as irinotecan in elderly and unfit patients with advanced NSCLC.
