The software is also compatible with Microsoft Windows XP (SP1 + SP2), MS Windows b7e8fdf5c8

Invent Upshot Crack + License Key Full (Final 2022)

This version is currently in beta mode. It is still a work in progress. New version will be released after the product is reviewed and approved by our partners and business users. Invent Upshot is a feature rich and low TCO, agent-less network discovery, hardware & software inventory and remote tool, with which you can manage a single PC to several home and corporate networks in a few minutes (hard wired or wireless). This software is not just another network inventory solution. It is different from the competition : While the other network inventories software becoming increasingly heavy to integrate (agents, databases, server changes, Active Directory integration,.), Invent Upshot offers a radically different solution. Our standalone tool requires no change in the networks, no dedicated equipment, no database greedy of resources, zero user intervention and can be hosted, of course, on a fixed computer, a laptop or a server. With Invent Upshot, your network stays clean. Furthermore, the automatic networks discoveries and the multi-threaded inventories allow you to quickly make an inventory of all the disconnected and networked computers. As much of its competitors, Invent Upshot has the capacity to carry out effective remote inventories. But, in our opinion, this kind of software should not stop with these collection of informations. Even though it is a lightweight tool, this application features multiple components to analyze the collected data. The customizable layout of grids and the customizable comparative grids & charts will help you to maintain your infrastructure and to lead a reflection on the evolution of your network. The home users, the administrators and more particularly the IT services companies and the management service providers (MSP) can easily see its high portability, its adaptability, its weak influence on a network, its facility of integration, its wide range of powerful and flexibles features and its capacity to manage several networks as a decisive advantage! Invent Upshot is a feature rich and low TCO, agent-less network discovery, hardware & software inventory and remote tool, with which you can manage a single PC to several home and corporate networks in a few minutes (hard wired or wireless). This software is not just another network inventory solution. It is different from the competition : While the other network inventories software becoming increasingly heavy to integrate (agents, databases, server changes, Active Directory integration,.), Invent Upshot offers a radically different solution. Our standalone tool requires no change in the networks, no dedicated equipment, no database greedy of resources,

What's New In?

The moment you have understood that Invent Upshot brings real value and practical advantages to your network, it is time for you to take charge of the collection of this important information. This will allow you to monitor your network, to make your workforce more efficient and to offer a professional image to your customers. What's Inside: Invent Upshot is composed of 5 different modules: the Devices Inventory, the Applications Inventory, the Users Inventory, the Software Inventory and the Networks Inventory. Thanks to the capacity to collect the inventories not only of computers but also of the applications installed or the software used in these computers, Invent Upshot is able to provide the most complete information on your network. Invent Upshot has a user interface that is extremely intuitive, a clean and modern look, that is very user friendly and that presents its information in a very clear way. Some examples to illustrate the features of Invent Upshot: * An inventory of devices, applications, users and software all in real time. * An inventory of your network (it can be composed of several user workstations or of whole groups), using advanced algorithms, even when the user do not wish to connect to a distant computer, or when the computer has no TCP/IP connection. * The capacity to discover new equipments on the network with automatic remote inventory. * The capacity to discover new applications and or software by using the Auto App and Auto Software modules (collecting software and applications not installed anymore). * The capacity to collect the computer & software inventory of your local

network on a portable device (laptop or USB key) What's New in this Release: New Way of making Descriptions: The existing inventories are built on the old technologies, or use strictly a plain text format. Thanks to the new format implemented in this version, Invent Upshot will offer you, directly, the possibility to make your descriptions with the format of images (PNG or JPG format) or with a SVG or an HTML5 format, the compatibility of your existing descriptions and the possibility to make new descriptions with a plain text format. As you can see, with the new format of descriptions, you will be able to: - Improve the information quality for each items: you will be able to make a nice pictures of the applications, the software or the computer, the important information (user friendly instructions, comments, ...) will be perfectly displayed in the new format of descriptions. Moreover,
