The application has been made available on the PlayStation Network (PSN). For more information on the game please visit the official website iPad, originally unveiled on March 2, 2007, is the most successful consumer tablet device in the world and is the #1 best-selling product across all its product lines. The iPad was created by the Apple design team as a means to design and build a larger-than-life consumer product targeted towards the then-burgeoning market of large form factor tablet and netbook devices. Steve Jobs announced the device at Apple's Macworld Conference & Expo on January 27, 2007, and unveiled it on February 2, 2007. The iPad is a large, tablet-style, multi-touch computer built around Apple's A4 X-Series processor, which makes it the world's most advanced tablet computing device. At its heart, the A4 chip features a PowerVR SGX 543MP2 GPU with Open GL ES 2.0 support and 1 gig of LPDDR2 mobile DRAM. A standard USB 2.0 port, as well as an optional Dock Connector interface for syncing and charging, allow the iPad to connect to a wide variety of peripherals. The iPad uses a TFT LCD screen, which is great for video, and a display resolution of 1024x768, which is perfect for a consumer tablet. It utilizes FaceTime to make video calls, FaceTime Audio to stream quality voice calls, Messages to send and receive messages, and is compatible with a wide range of accessories including cameras, case, and dock. More interestingly, the iPad comes pre-loaded with an immersive 3D experience. The device is equipped with the most advanced 3D graphics on any consumer tablet. The A4 chip has 3D graphics capabilities for gaming that rival consoles. This powerful combination of custom-built chip design and revolutionary display technology makes the iPad, at its most fundamental level, not only the world's most advanced tablet, but also the world's most exciting computer.
