I am working on a Django project that uses a script that retrieves data from a remote DB2 database. I am using the Django REST Framework to retrieve this data. The problem is that I have to do a little extra work for this data to come out in a JSON format. I have already created a Serializer class to return the data in JSON format when the script is run locally. class MyJSONSerializer(serializers.JSONSerializer): def write(self, obj, \*\*kwargs): obj\_dict = {} for key, value in obj.iteritems():
