In 2016, Autodesk acquired Alibre 3D, a German 3D CAD application, and combined the two products into one. AutoCAD Cracked 2022 Latest Version 2018 is available for iOS and Android devices as well as all computer operating systems. It can be used on a tablet or in the web browser on a laptop. In 2017, AutoCAD 2019 was released. AutoCAD 2019 can be used on a tablet or in the web browser on a laptop. The version number was released simultaneously with the release of AutoCAD 2018. Features AutoCAD software has the following features: Drafting AutoCAD Drafting Tools Drafting Objects Textures Overdrawing Layers Themes Document and Macro Themes 2D and 3D Viewports 3D Modeling Rigging Mechanical Simulation Animation Component-based modeling NURBS modeling Contour lines Subdivision surfaces Support for 2D and 3D object definitions Solid modeling Surface modeling Architectural modeling Databases AutoCAD R14 (or R12) contains a database of over three million parts. AutoCAD 2012, 2013, 2016, 2017, 2018 and 2019 use AutoCAD R14. Drawing Tools The Line Style dialog allows the user to choose between "classic" and "vista" line styles. .NET .NET assembly can be used as an add-in. It consists of a .NET assembly and a .NET Runtime which are installed on a computer. The functionality of AutoCAD can be extended by writing .NET assembly which can then be installed as a component on AutoCAD. \*/ 1. Field of the Invention The present invention relates to an image recording apparatus for scanning an original document with a plurality of lines of light beam and a plurality of scanning elements for corresponding light beams, which are disposed on the scanning line along the scanning direction and adapted to record the plurality of scanning lines with a plurality of scanning elements which are lined up in a direction perpendicular to the scanning direction, and to control the image recording apparatus so as to record the image of the original document in an appropriate gradation. 2. Description of the Related Art Conventionally, image recording apparatus are known that record an image of an original document, wherein an original document is illuminated with a light beam from a light source such as a lamp and the light beam is scanned over the original document, and an image of the original document is recorded by the scanning of the light beam on a photosensitive recording medium. The recording density of the image of the original document is increased by increasing the scanning width or the number of lines of the scanning. Therefore, the image recording apparatus that are used in the conventional art are provided with a plurality of scanning elements for scanning the light beam over the original document. However, the scanning elements used in the conventional art were, in general, common parts irrespective of the gradation of the image. That is, even when the gradation of the image is changed, only the number of the scanning elements is changed. Therefore, the image recording apparatus using the conventional scanning elements was, in general, capable of adjusting the gradation of the image by changing the scanning elements. When the image recording apparatus used in the conventional art is equipped with the scanning elements having different gradations, the number of scanning elements used to form one line of the image of the original document is different for each gradation. That is, a high gradation requires a larger number of scanning elements than a low gradation. Therefore, it is difficult for the conventional image recording apparatus to control the gradation of the image recorded with the various gradations while using a small number of scanning elements. Also, the conventional image recording apparatus were not capable of recording an image of an original document having gradations that vary in a large range. In the image

recording apparatus of the conventional art, the scanning elements are selected and controlled in an attempt to equalize the gradation of the image of the original document to a desired gradation. However, even when the scanning elements are selected and controlled, the range of gradation of the
