codmw33dmcrackdownload codmw33dmcrackdownload Â· Google A: well, you  
can use grep to exclude already common words from your search string like  
this: grep -vxF -e "(Please|Please kindly)" -e "Fee?" -e "Refund" (grep -vxF -e  
filter pattern to tell grep to negate the expression and ignore the pattern) i.e.  
if you have a file containing hundreds of lines, then you can get all lines that  
matches your search pattern, but do not contain those terms in the pattern:  
cat file line 1 line 2 line3 line 4 grep "line" file line line3 grep "line1" file line2  
line4 grep "line3" file Explanation: the -F option is used to add the pattern to  
the end of the search string, and -x is used to give grep the position of the  
pattern in the search string. Also, if you don't want to count those lines that  
contains the pattern in the file, you can add -c 1, then grep will return the  
number of matching lines, e.g.: grep -c -e "(Please|Please kindly)" -e "Fee?" -e  
"Refund" file (grep -c -e "filter pattern" file tells grep to count how many lines  
that contains the pattern) i.e.: cat file line 1 line 2 line3 line 4 line 5 grep -c -e  
"line"
