How does this website work? What is AsseenOn.Net? AsSeenOn.Net is a blog which collects the same category like top, nlogit, download, how to, blog list, software, game, movies, etc and post the complete review and tutorial of them. At the same time, we also try to provide visitors with the best and latest programs.

Q: Can access to facebook webhook - FB.Event.subscribe asp.net I want to create and call webhook that show news in my website. I used a library but when i tried to subscribe my app, i got error : Facebook on Webhook: This application is not allowed to send the following Facebook events: User management, User photo and user permissions, User timeline, User friends, User birthday, User location. Users can only subscribe to custom application events. My code is very simple : `FB.Event.subscribe('app-id/app-name/' + data.gid + '/' + data.sid, function(data){ console.log(data); });` My App use Facebook access\_token and secret\_key that i found as string in my page source when i try to debug the webhook call on facebook : My question is: Is it true that fb cannot subscribe some event? My second question is : Is there another way to subscribe to events in asp.net and manage them later from my c# code? Edit : I know that most of you will say the library to use but i don't know it. A: Adding an answer to this question to mark it as solved. You need to use the Graph API for this. Q: EmberJS - How to make a component available to all routes? I have several routes in my application, some are child routes of other routes. I'd like the component that I defined in a route to be available on all other routes too. Here is what I mean : c6a93da74d
