The surfaces of the elements of the pathologic soft tissue, bones, and blood vessels will be well-described in CT-3D reconstruction of the diseased segment ([Figure 2](#F2){ref-type="fig"}). Care must be taken to understand and distinguish the differences among the anatomies. The first CT slice contains the cross-sectional plane in which the amputated segment should be compared. If the amputated segment is too large, including the entire limb, it is difficult to clearly distinguish the surface structure of the remaining segment. It may be important to consider the positional relationship between the articulating joint

surfaces and the surrounding soft tissues (c6a93da74d
